

New 5-axis CNC for larger parts

Investment in our productive capacity has always been a strategic principle for us. Accordingly, in 2016 we acquired a DMG MORI, model DMF 260. In general terms, this 5 axis machine with fixed table of 700 x 2600 x 700 (mm), with high technological level, has the capacity to machine pieces with length up to 2 600mm.

In summary, this equipment brings:

- reduced production times;
- final product increased quality;
- suitable for the heavy machinery industry.
